This Arithmetic Course of Study is designed to give our teachers definite and specific help so that all may refer to it and obtain information whenever needed. It is not designed to force slow learners, nor hold back those who learn rapidly, but rather to stimulate learning at all grade levels and establish certain definite goals of achievement. If other more extensive information is desired by teachers we recommend the use of the Pennsylvania Elementary Course of Study which has been designed for use of all schools throughout the Commonwealth and therefore contains a wealth of general information not included in this specific Course of Study for the use in a particular school system.

We stress review work for all grades for the first few weeks of every new semester, especially in the fall after the long summer vacation. Many facts will need re-teaching, and most will need a period of review of the previous semester's work.

Evaluation of all work taught is also one of the "musts" in our teaching situations. Check and re-check to make sure that information which should be understood is actually understood by all pupils in the class.

The Committee March 1953.

# AIMS FOR PRIMARY GRADES

- 1. To create in the children an interest in numbers and to build up right attitudes toward them.
- 2. To keep the fundamental number facts and processes taught within the children's actual experiences and of a nature to minister to their needs.
- 3. From the beginning to keep the children's "experiences" in arithmetic concrete; meaningful, and significant.
- 4. To develop understanding, accuracy, and mastery of the essential skills in computation and number manipulations progressing from the concrete to the sbstract.
- 5. To develop a basic arithmetic vocabulary, to develop in the children the habit of expressing themselves in arithmetic terms.

# AIMS FOR INTERMEDIATE GRADES

- 1. Develop accuracy and understanding of essential skills.
- 2. To develop logical thinking and reasoning to help the child use the skills acquired.
- 3. To develop right attitudes toward effective use of everyday arithmetical situations.
- 4. To develop continued interest in further use and practice of necessary arithmetic as used in life activities.

# Grade I

The first few months of the child's number experience in school may be known as a readiness period. This readiness involves a certain background and attitude toward quantitative ideas on the part of the children, and is the special problem of the teacher during this period.

The development of number readiness entails organizing the child's own experiences in number, developing a background of number concepts, and gradually building a basic number vocabulary.

During the first semester great stress should be placed upon number concepts, through the use of objects and pictures.

Have the children count orally and rationally to 10.

Vocabulary concepts listed in Section IV should be taught as the need arises and as they correlate with the activities in the room.

The remainder of the outline should be completed by the close of the second semester.

# References for Grade I

Quantitative Aspects of Experiencing in the Elementary School, Bulletin 360. Department of Public Instruction, Commonwealth of Pennsylvania.

Teaching Arithmetic in the Elementary School, Primary Grades - R.L. Morton. Silver Burdett Company.

Understanding Numbers - Studebaker, Knight and others. Scott, Foresman and Company.

Teaching the New Arithmetic - Wilson, Stone, and Dalrymple. McGraw Hill Book Company. Inc.

#### Grade 1

- I. Number Concepts
- II. Formation of Numbers 1 100
- III Counting orally
- IV. Vocabulary Concepts
  - V. Time
- VI. Association of numbers and words one to ten.
- VII. Addition facts

# I. Number Concepts 1 - 10

- 1. Use of co ncrete objects 1 10
  - a. Number of seats in a row, chairs in a room, children in group, etc.
  - b. Charts and pictures
  - o. Number groups in various patterns. Example 6:

000	0 0	00
	00	
000	<b>Q</b> 0	0000

Sans of the State of the State

- Read and write the numbers 1 10.
   Illustrate each number with pictures.
- 3. Semi-concrete material
  - a. Transition from concrete to abstract concepts.
  - b. Bridge the gap between concrete and abstract numbers slowly and adequately with solving of simple oral problems according to various abilities.

    Example: 2 chairs and 2 chairs are 4 chairs to 2 and 2 are 4.

#### II. Formation of Numbers 1 - 100

- 1. Reading and writ ng numbers 1 100.
  - a. By l's
  - b. Number games and rhymes. Ten little Indians
    One, two, buckle my shoe.
- 2. Supply missing numbers 1, 2, 3, \_\_\_\_, 5.
- 3. What number comes before and after?
- 4. What number comes between 7 and 9?

## III. Counting orally 1 - 100

- 1. Counting, reading and writing of numbers.
  - By 1's to 100
  - By 10's to 100
  - By 5's to 100
  - By 2's to 24
- 2. Number Sequence
- 3. Ordinals first, second, third, etc.

# IV. Vocabulary Concepts

1. Comparative values

biglittle	frontback
largesmall	narrowwide
highlow	leftright
tallshort	beforeafter
nearfar	firstlast
updown	higherlower
moreless	largersmaller
mostfewest	tallershorter
highestlowest	nearerfarther

- 2. Geometric figures: circle, square, triangle.
- 3. Everyday measures
  - a. Weights

Pounds (your weight: buying food - 1 pound butter, 2 pounds sugar).

b. Distance

Miles (speedometer in automobile for trips)

- c. Quantity
  - Cups, pint, quart, gallon.
    - (1) Various measuring devices.
    - (2) Uses (kitchen, recipes, buying food or buying gasoline.
    - (3) Things prepared in quantities for delivery. (Milk, ice cream, gasoline)
- 4. Money

  - a. Cent, nickel, dime, quarter, half-dollar, dollar.
    b. Count money for savings stamps, milk, cafeteria, other school room situations involving money such as, contributions to welfare fund.
- 5. Introduction to addition
  - a. Meaning of adding numbers
  - b. Arrange groups of objects (concrete examples)
  - c. Adding numbers to the sum of 10.
  - d. Oral problems for solution Addition - 1 and 1 are 2. Subtraction 1 from 2 leaves 1.

#### V. Time

#### 1. Calendar

- a. Use of calendar for birthdays, holidays, vacation days, special programs at school.
- b. Recognition of month and days of week.
- c. Number of days per month (30 or 31 except for February)
- d. Number of days in a week.

#### 2. Clock

- a. Hour and minute hands.
- b. Recognition of hour.
  What time do you go to bed, eat breakfast, go out for recess?
- c. Draw clock face to illustrate hours only.
- VI. Association of numbers and words one to ten.
- VII. Addition facts only with sums of 10. Subtraction facts.

The teacher should provide adequate concrete number experiences which bear a close relation to life and to the children's actual needs.

Correlate all arithmetic with classroom situations as they arise. Numbers must have a function to be meaningful.

Always review preceding unit's work.

# Grade 2

#### I. Minimum Requirements Units 5-6 Grade 2-1

- · A. Reading and writing numbers.
  - · 1. Continuation of development of number concepts by use of objects.
  - 2. Reading two figure numbers.
    - 3. Writing numbers from dictation from 1-250.

# · B. Fundamental Processes

- · 1. Addition
  - a. Mastery of number facts from 1-10
  - b. Addition of two figure numbers, without carrying.
  - c. Adding three one figure numbers.
  - d. Use of + sign.
- 2. Subtraction
  - a. Corresponding subtraction facts.
  - b. Subtraction of two figure numbers, without borrowing.
  - c. Use of sign.
- 3. Multiplication
  - a. Counting by two's to 50.
  - b. Multiplication facts of 2's
  - c. Use of X sign.
- 4. Division
  - n. Corresponding division facts.

# C. Denominate Measures

- 1. Quart
- 2. Pint
- 3. Inches
- 4. Foot
- 5. Yard

# D. Social Uses of Arithmetic

- 1. Telling time on the hour.
- 2. Finding page numbers.
- 3. Value of penny and nickel.
- 4. Continuation of comparative values.

# E. Problem Solving

Simple, oral, concrete one step problems, requiring the application of addition, subtraction, and multiplication facts taught.

# F. Diagnosis and Remedial Work

Attainment tests, and various diagnostic tests,

## I. Minimum Requirements Units 7-8 Grade 2-2

- A. Reading and writing numbers.
  - 1. Reading and writing two and three figure numbers from 250 1000.
  - 2. Teach words.
  - 3. Roman numerals.

# B. Fundamental Processes

- 1. Addition
  - a. Mastery of number facts from 10 20.
  - b. Addition of two figure numbers without carrying.
  - c. Adding three one figure numbers.
- 2. Subtraction
  - a. Corresponding subtraction facts.
  - b. Subtraction of two figure numbers without borrowing.
- 3. Multiplication
  - a. Multiplication facts of 3's to 9's.
  - b. Multiplication of two figure numbers without carrying.
- 4. Division
  - a. Corresponding division facts.
- C. Social Uses of Arithmetic
  - 1. Teach terms.
- D. Problem Solving
  - 1. Writing dates.
  - 2. Telling time on hour and half hour.
  - 3. Finding page numbers.
  - 4. Value of penny, nickel, dime, quarter, half-dollar.
  - 5. Recognizing numbers in everyday activities.
- E. Diagnostic and Remedial Work
  - 1. Simple written one step concrete problems requiring the application of addition and subtraction facts taught.
  - 2. Multiplication facts.

## First Report Card Period

- 1. Counting and writing numbers from 1-250.
- 2. Reading page numbers, supplying missing numbers, etc. Anything involving the use of numbers.
- 3. Addition facts and corresponding subtraction facts from 1 through 10.

# Second Report Card Period

- Multiplication facts of 2's through to 9's and reversals correlated with addition facts.
   Corresponding division facts.
- 2. Review of semester's work.
- 3. Correlate denominate measures, scalal uses, problem solving, and testing.

# Third Report Card Period

- 1. Counting and writing numbers from 250-1000.
- 2. Reading numbers, supplying missing numbers, etc. Anything involving the use of numbers.
- 3. Addition facts and corresponding subtraction facts from 10-20. (See outline).

# Fourth Report Card Period

- 1. Multiplication facts of 3's through to 9's and reversals correlated with addition facts.

  Corresponding division facts.
- 2. Review of semester's work.
- 3. Correlate denominate measures, social uses, problem solving, and testing.

# Minimum Requirements in Detail

# A. Reading and Writing Numbers

Continue development of number concepts through the use of objects. (Ex. Using persons and objects)

Reading and writing numbers through 1000.

Suggested practices

- 1. Read these numbers 2; 11; 13; 90; 105; 146; 250.
- 2. Write these numbers in words and vice-versa 1 10.

3. Finding page numbers.

- 4. Write these numbers in order. Begin with smallest, or largest. 12 - 11 - 13 - 19 - 17 - 15 - 16 - 14 - 18
- 5. Comparative numbers

Which is larger? 19 - 33

Which is smaller? 18 - 45

15 - 24 Which is more?

Which is less? 34 - 22

#### B. Social Uses

- 1. United States money
  - a. Recognition of U.S. coins.
  - b. Writing U.S. money to \$1.00 Ex: 1¢; 2¢; 3¢; 4¢; 25¢; \$1.00. Use in simple oral problems.
- 2. Telling time
  - a. Hour
  - b. Half-hour
- 3. Writing date
- 4. Roman numerals (Omit enclosure lines top and bottom)
  - a. Reading through 12.
  - b. Writing through 12.
- 5. Denominate measures

  - a. Pint, quart, inch, yard, dozen, half-dozen.
    b. Also use of special collective terms as "pair" and "dozen".

#### C. Fundamental Processes

- 1. Addition

  - a. Vocabulary add, plus, and. b. When introducing "O" always use the term "zero".
  - c. Addition facts to be taught: ---

Easier Facts	<u>0</u>	5 <b>5</b>	2	3 3	1 2	3 1	7	6 <u>1</u>	7	1 6	8	2 9	0 <u>∡</u>	.0 2	1	1	8
	4 5	4	2 3	0 <u>5</u>	5	6 6	1 7	8 Q	9	0 <u>6</u>	9 1	4	42	1 2	5 <u>2</u>	2 7	1 8
	2 8	1 0	3 4	5 4	2 4	2 Q	2 1	5 0	9	2 6	0	46	3	٠.		١.	

<u>Harder</u>	3	0	4	0	9	6	0	7	1	3	0	6	4	8	6	6
Facts	<u>0</u>	<u>3</u>	<u>Q</u>	<u>8</u>	<u>0</u>	<u>3</u>	Z	Q	5	<u>2</u>	<u>9</u>	<u>0</u>		<b>3</b>	<u>2</u>	5
	3 9	5 3	2 5	3 5	7 2	4 7	7 4	8 4	7 5	3 7	<b>5</b>	3	4	7	6 4	5 7

The combinations gradually increasing in difficulty until the sum of 20 has been achieved.

It is suggested that this test be mimeographed (hectographed) and given for diagnostic purposes. For remedial w ork it would be advisable that the test be run off with the answers and put into the hands of the children.

- d. Suggested Activities -Add 3 to each: 1-5-4-7, etc.: sums not to exceed 20.
- Add down No carrying

e. Addition of one column

1 1

one order

Addition of two column, two orders 64

35 10

411

Addition of three column, two orders 231

First steps from the basic facts in the direction of column addition should be to examples such as these whose sums do not exceed 10.

Other three-digit combinations:

f. Use of + sign -2+3=9+1= 3 plus 2\*

g. Checking: check by adding up

h. Simple and written concrete one-step problems using the facts taught.

# II. Subtraction

a. Vocabulary: subtract - minus - take away - less - more b. Teach the following facts:

Easier Facts	<u>0</u>	5 <u>1</u>	3 <u>2</u>	7 2	1	8 <u>1</u>	3 <u>3</u>	4 4	5 <u>3</u>	6 <u>6</u>	<u>4</u> <u>2</u>	9 1	9 9	3 <u>0</u>	5 <u>ፈ</u>	6 0	<u>5</u> <u>2</u>	9 <u>0</u>
	6 <u>1</u>	3 <u>1</u>	2 <u>1</u>	7 <u>1</u>	6 <b>5</b>	9 <u>8</u>	4 <u>1</u>	<b>8</b>	4 0	5 5	5 0	6 <u>3</u>	4	2 <u>2</u>	10 _1	10 2	6 2	2 <u>0</u>
	7 <u>0</u>	<u>4</u>	7 2	8 8	10 _5	9 <u>5</u>	11 _2	12 6	<u>0</u>	1 <u>0</u>	8 7	7 3	7 5	9 <u>3</u>				
<u>Harder</u> <u>Facts</u>	7 <u>6</u>	8 <u>2</u>	10 _7	9 7	8 <u>6</u>	12 _8	10 <u>6</u>	10 _4_	9 <u>4</u>	9 <u>6</u>	8 3	10 <u>9</u>	10 _3	11 _7	9	7 4	12 _9	11 _5
	10 8	11	11.	12 .7	11 6	8 5	12 3	11 9	12 4	11	12 5							

Follow the same advice as given for the addition facts.

# Suggested Activities:

a. Two place numbers without borrowing

b. Simple subtraction, no borrowing, zero in answer

In teaching subtraction, say 4 from 8 leaves 4.

Suggested plan for teaching numbers in the Primary Grades.
Dr. Thiels of Detroit, Michigan, has worked out this plan and it has been very successful in Detroit.

- 1. Combinations adding 1. Reverse
- 2. Combinations adding 2. Reverse
- 3. Combinations adding O. Reverse
- 4. Doubles.
- 5. Doubles plus 1.
- 6. Doubles plus 2.
- 7. Combinations which are one less than doubles as;
  - 3 plus 2 4 plus 3 5 plus 6 7 plus 6 8 plus 7 9 plus 8 5 plus 4
- 8. Combinations adding 10.
- 9. Combinations adding 9. Reverse
- 10 Combinations left to be taught -
  - 5 plus 3 6 plus 3 7 plus 3 4 plus 6 4 plus 7 4 plus 8 5 plus 8 plus 6 8 plus 3 5 plus 7
- 11. After the addition facts have been thoroughly taught, begin the subtraction facts.

## III. Multiplication Facts

The sign (x) should be used only as a sign to tell the children the method to use.

a. Say - "Six 2's": "Two A's" etc.

b. Teach the following facts:

## Desirable teaching order:

2	5	8	4	6	3	7	9	1	3	4	5	6	7	8	9
2	2	2	<u>2</u>	<u>2</u>	2	2	2	2	2	ż	3	3	Ž	3	<u>3</u>

# (and reverse)

Begin by teaching the 2's. The 2's are easy because of their intimate relationship to the doubles in addition. Pupils who are proficient in their addition combinations, already know the 2's in multiplication and need merely to learn the meaning of multiplication and to become accustomed to the language of multiplication.

#### Suggested method:

For the first two  $\infty$  mbinations,  $\frac{2}{2}$  and  $\frac{2}{2}$ , the lesson may proceed in some such manner:

Teacher: "Let us go back to some of our numbers in addition."

How many are 2 and 2?"

Pupil: "Four."

Teacher: Writing on the blackboard 2. "Yes. Two and two are four. How many 2's did I write?"

Pupil: "Two."

Teacher: "Then we can say that in another way. Instead of saying 'two and two are four,' we can say, 'two 2's are four,' Now, let us take another example. How many are 5 and 5?"

Pupil: "Ten."

Teacher: Writing 5 . "Yes. Five and five are ten. How many 5's did I write?"

Pupil: "Two."

Teacher: "In what other way can I say that five and five are ten?"

Pupil: "You can say, 'two 5's are ten!,"

Teacher: "When we want to say, 'two 5's are ten,' instead of writing it as I have written it here, we write it this way - 5
That means, two 5's are 10.

The sign in front of the 2, (x) tells that we mean, two 5's are 10. When we write this, 2 we mean, two 2's are 4."

The purpose here is not to give new arithmetical facts but to give old facts in new form and to acquaint the pupils in a limited way with the language and meaning of multiplication without the necessity of presenting any new facts.

Pupils should now discover that not only 5 but also 2

c. Review work taught.

One place multiplier, no carrying, 22 42 x3 x2

Suggested activities for drilling these facts. Interesting games and devices for reviewing multiplication facts.

Test on multiplication facts:

7 2	4 <u>1</u>	5 2	5 1	1 <u>2</u>	6 <u>1</u>	2 <u>2</u>	3 <u>1</u>	1 2	7	2 <u>3</u>	2 <u>1</u>	8 <u>2</u>	0 <u>1</u>	0 <u>2</u>	3 <u>2</u>	1
2 0	<u>4</u> <u>2</u>	0 <u>3</u>	3 Q	9 <u>1</u>	0 <u>0</u>	8 <u>1</u>	1 0	1 1	4 <u>0</u>	6 <u>2</u>	5 <u>Q</u>	8 <u>Q</u>	7 <u>0</u>	9 Q	9 <u>2</u>	4
7 3	9 3	8 3														

Follow the same advice as is given for the addition facts.

# IV. Division:

Method:

The division fact 3/27, should be read in some such form as 3's in 27, 9.

The pupil should think of 3)27 as asking the question "How many 3's in 27?"

Avoid "3 goes into 27 how many times?"

Facts to be taught:

How many 2's in 12? How many 3's in 24?

Read and give answers orally: 8 ÷ 2 21 ÷ 3 2)8 3)21 etc.

Teaching of Arithmetic in the Ele. entry School, Primary Grades, R.L. Morton, Silver Burdett Company,

ተወ.

## Grade 3

- I. Minimum Requirements Units 9-10, Grade 3-1
  - (At least three weeks review on work of previous grades)
  - A. Reading and writing numbers.
    - 1. Reading and writing numbers to 1000.
    - 2. Reading and writing dollars \$ and cents ¢ through \$10.00 using \$ and point.
  - B. Fundamen tal processes
    - 1. Addition and its vocabulary.
      - a. Review facts from 12 20.
      - b. Single column addition to 20.
      - c. Two figure and three figure addition, with carrying no more than three addends.
    - 2. Subtraction and its vocabulary.
      - a. Corresponding subtraction facts.
      - b. Subtraction of two figure numbers without borrowing.
    - 3. Multiplication and its vocabulary.
      - a. Review 2's and 3's.
      - b. Multiplication facts corresponding to table of 4's including reversals.
      - c. Multiplication of two figure numbers with carrying using tables taught.
    - 4. Division and its vocabulary.
      - a. Simple division by 4's with 2 and 3 figure dividends, no remainders, no carrying.
      - b. Zeros in dividend.
  - C. Measures Review pint, quart, gallon, inch, foot, yard, dozen, dozen, dozen, dozen, dozen,
  - D. Social Uses of Arithmetic
    - 1. Use of numbers in activities such as: keeping scores in games, making change, telling time, use of index, concept of 1/2, 1/3, 1/4, 1/5.
    - 2. Value of 1 quarter, 1/2 dollar and dollar.
  - E. Problem Solving
    - 1. Reading problems to obtain concepts of such words as sum, difference, total, take away, how much more, less than, product.
    - 2. Oral and written problems involving addition and subtraction facts to 20.
  - F. Diagnostic and Remedial Work
    Attainment Tests and various Diagnostic Tests.

# I. Minimum Requirements Units 11-12. Grade 3-2

- A. Reading and writing numbers.
  - 1. Reading and writing numbers to 5 digits or 10,000.
  - 2. Raview reading and write \$'s and cts. through \$10.00.
  - 3. Reading and writing Roman num erals through XX without bars.

## B. Fundamental processes.

- 1. Addition and its weabulary.
  - a. Addition by e dings in sequence.
  - b. Addition of \$'s and cts. through \$10.00.
- 2. Subtraction and its vocabulary.
  - a. Subtraction of \$'s and cts. to \$10.00.
  - b. Subtraction of three figure numbers without borrowing.
- 3. Multiplication and its vocabulary.
  - a. Review tables, multiplication facts corresponding to table of 5's and 6's and reversals.
  - b. Multiplication of three figure numbers with carrying using one figure multiplier. Simple examples using two figure multiplier. Zero difficulties.
  - c. Multiplication of \$'s and cts. through \$10.00 by one figure multiplier.
- 4. Division and its vocabular y.

  a. Simple division by 6's. Same as listed in 3-1.

#### C. Measures

- 1. Continuation of 3-1.
- D. Social Wes of Arithmetic
  - 1. Continuation and development of 3-1 social uses.
  - 2. Concept of 1/6.
- E. Problem solving.
  - 1. Easy one step problems involving the four processes.
- F. Diagnostic and Remedial work.

Attainment Tests and various Diagnostic Tests.

# First Report Card Period Unit IX

Review all work of previous grade.

Numbers - Reading and writing to 1000.

Reading and wr iting dollars and cents through ten dollars

using dollar sign and decimal poi nt.

Addition - Facts 12-20 (Review).

Single column through 20.

Two figure and three figure with carrying no more than

three addends.

Subtraction - Facts 12-20 (Review).

Two figure numbers without borrowing - with gaps.

Multiplication - Facts corresponding to tables of 4's:

Two figure numbers without carrying using facts taught.

Division - Using facts taught in tables.

#### Second Report Card Period Unit X

Addition - Facts 12-20 (Review),

Single column through 20.

Two figure and three figure numbers with carrying - no

more than three addends.

Subtraction - Facts 12-20 ( Review)

Two figure numbers without borrowing. With gaps as 68

Multiplication - Facts corresponding to tables of 5's. Two figure

numbers with carrying, using facts taught.

Division - Facts corresponding to tables of 5's. Using two and

three figure dividends - no remainders - no carrying -

zeros in dividend.

Measures - As stated in outline - pint, quart, gallon, \frac{1}{2} gallon,

inch, foot, yard, dozen, & dozen.

Problems - As stated in outline:

Social Uses - As stated in outline.

و المحالمة

\*\*\*\*

**-**8

#### Third Report Card Period Unit XI

Review all work of previous units.

Numbers - Reading and writing to 5 digits or 10.000.

- By endings. Addition

Dollars and cents through ten dollars using dollar sign

and decimal point.

Roman numerals through XX - without bars.

Subtraction - Dollars and cents through ten dollars.

Three figure numbers without borrowing but with gaps as

346 975 <u>- 23</u>

- As stated in outline - minute, hour, hours in day. Measures

A continuation of Units IX, X - days, week, months, year.

Multiplication - Facts corresponding to table of 6's.

Three figure numbers with carrying using 1 figure

multiplier.

Simple examples using two figure multipliers and including

zero difficulties.

Division - Facts corresponding to table of 6's.

Use 2 and 3 figure dividends - no remainders - no

carrying - zeros in dividend.

#### Fourth Report Card Period Unit XII

Addition - Review dollars and cents through \$10.00, using \$ sign and

decimal point.

- \$ and ¢ through \$10.00. Subtraction

Three figure numbers without borrowing.

Check by adding.

Multiplication- Teach two flux multipliers include zero difficulties,

- Teach long division method. Use two and three figure Division dividends, no carrying, no remainders, zeros in dividend.

(Facts corresponding to tables taught. 2's to 6's.)

- Easy one step problems involving the four processes. Problems

- Suggestions as stated in outline to be correlated with Social Uses

other work throughout the semester.

#### I. Minimum Requirements in detail

- A. Reading and Writing Numbers
  - 1. Review Lecond grade.
  - 2. Introduce as new work Arabic Numbers to 5 digits or 10,000.
    - a. Teach reading and writing numbers according to place value. Look at these numbers and see how the figure changes its value.

Tens	Units or Ones
4 0	0 0
6	0
	<i>L</i> , 0

In other words 4 means 4 units.

In next number (40) means 4 tens.

In next number (400) means 4 hundreds. In next number (4000) means 4 thousands.

A child should be taught that a zero can be replaced by a number, and that number takes on the name of the place in which it stands.

Thousands	Hundreds	Tens	Units or Ones
8	8	4	3
	3	1	0
	3	0	1

The numbers when they are written read-

- 8 thousand 843
- 8 hundred 43
- 3 hundred 10
- 3 hundred 1

Never say "and" in reading whole numbers.

b. Before leaving third grade, a child should be able to analyze a four place number in this way. .

3 462 3 thousand

(four hundred) 462 4 hundreds, or 400

OF 60 sixty) and 6 tens,

(two) or

462 or four hundred sixty-two.

c. Suggested practices:

1 - Read these numbers: 8; 78; 843; 708; 650; 900; ...050; 3.489

2.- Write these numbers in words and vice-versa: 106; 601; 160; 464; 300; 2,010; 8,567,

3 - Write the above numbers in order Begin with the smallest or largest.

The second of the second

4 - Match the following:
(a) 615 1. one hundred forty
(b) 300 2. three hundred
(c) 204 3. six hundred fifteen (d) 140 4. two hundred four
5 - 3864 means thousands, hundreds, tens, and ones.
3. Dollars and Cents
a. Writing dollars and cents through two orders to the left of
the point.
1. 4¢ introduced as \$.04 2. 55¢ as \$.55, etc.
3. 1 dollar as \$1; \$1.00
4. \$5.95; \$9.50; \$3.05
b. Reading dollars and cents through \$10.00
4. Roman Numerall
a. Reading to 20 b. Writing to XX (no bars)
p* withing do we due paral
B. Fundamental Process
1. Addition
a. Vocabulary
sum total plus amount
hros enforme
b. Test - addition facts taught in second grade. <u>Master</u> these <u>new facts</u> .
9786989611578
$\begin{array}{cccccccccccccccccccccccccccccccccccc$
7     9     6     9     8     8     9     6     5     8     7     7     9       6     5     9     8     7     5     6     8     8     6     8     9     7
· ·
It is suggested that these facts be mimeographed (hectographed)
and given for diagnostic purposes. For remedial work it would be advisable that these facts be run off with the answers and
put into the hands of the children.
c. Addition by endings
In sequence: 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3 3
A STATE AND ASSESSED ASSESSEDA
Not in sequence: 63 3 93 43 2 2 2 2 2
$\frac{2}{2}$ $\frac{2}{2}$ $\frac{2}{2}$ $\frac{2}{2}$ .
Reverse combinations: 3 4 3 5
Reverse combinations: 3 4 3 5 24 33 15 43
Adding up endings with carrying: 5: 5 5 5 5
Suggested activities: Add 3 to each: 9, 6, 14, 20, 16, 18, 49.
La

Add 6 to each number as you read.

8 18 28 3 8 48 58 68 78 88 98

Watch the tens figures in addition.

29 86 57 47 79 18

3 8 9 4 3 9

Department of Public Instruction, Commonwealth of Pennsylvania, Bulletin 360, Quantitative Aspects of Experiencing in the Elementary School, pp. 61-62.

d. Addition to three orders

735	892		
415	697		
123	9	Add	down.
314	34		

735 + 415 + 123 + 314 = 892 + 697 + 9 + 34 = 19 plus 64 = Add 56 452 980 etc. Add 46 305 217 etc.

- e. Addition of dollars and cents.

  Limit it to examples with addends not larger than two figures for the dollars as \$10.99.
- f. Checking Check by adding up.
- 2. Subtraction
  - a. Vocabuliry

    subtract take from
    difference how much is left
    minus more than
    change received less than
    fewer than
  - b. Test facts taught in second grade <u>Master</u> the following new facts:

12	14	12	12	13	12	12	16	12	18	14
8		9	7	6_		4_			9_	8
15	14	15	13	13	13	13	16	15	15	13
	6	6		5_	8	9		7	9	4_
17 9.	14	17 8	16 9	14 9_	12 6					

Follow the same advice as given for the addition facts.

c. Teach two place numbers without borrowing:

76 Say 4 from 6 = 2 24 2 from 7 = 5

Teach in all forms stated below:
Subtract 24 from 76
Find the difference between 24 and 76
76 - 24

	Take	ract	ron 7	<sup>7</sup> 6		76 24

d. In the second grade you had 20 of the 100 multiplication facts. Here are the new facts to be taught in the third grade.

```
4 \times 4 = 16
                     4 \times 3 = 12
                                           4 \times 5 = 20
                                                               4 x 9 = 36
4 x 7 = 28
                     4 \times 6 = 24
                                           4 \times 8 = 32
                                                                4 \times 2 = 8
4 × 1 = 4
                     4 \times 0 = 0
                                           5 \times 5 = 25
                                                                5 \times 2 = 10
5 x 4
        = 20
                      5 \times 8 = 40
                                           5 \times 3 = 15
5 \times 0 = 0
                                                                5 x 6 = 30
                     3 x 7 = 35
5 x 9 := 45
                                                                5 \times 1 = 5
6 \times 0 = 0
                      6xl = 6
                                           6 \times 6 = 36
                                                                6 \times 7 = 42
6 \times 8 = 48
                      6 \times 9 = 54
```

Suggested activities for drilling these facts:

Interesting games and devices for reviewing multiplication tables.

Morton, R.L., <u>Teaching Arithmetic in the Elementary School</u>, <u>Primary Grades</u>, Silver Burdett Co.

Test multiplication facts.

Harder Facts	6	9 2	5 4	4 3	7	7 5	6 4	9	8	8 5	8	6 <u>5</u>	9	7

Follow advice given for the addition facts at the end of Sec. B 1. b,.

e. Rationalization of multiplication. Where attempts are made to teach the children why the second partial product is set one place to the left as a step in teaching how to multiply by a two-place multiplier, this plan is used. The multiplier is broken into its units and 10's value, and each is multiplied by separatedly. In the examples: 242

are done. The product of the multiplication by the 10's is added to the result obtained from multiplying by the 2, thus:

242

484

484 9680

It is shown that since the left hand figure is always a value of 10 or a multiple of 10, the product resulting from using it as a multiplier will end in zero. Therefore a space is left for the zero by treating the left hand figure as a separate multiplier and setting the second partial product one place to the left. Multiplication by a two-place multiplier ending in zero should be the first two-place multiplier taught if the above rationalization is used.

Wilson, Stowe, and Dalrymple, <u>Teaching the New Arithetic</u>, McGraw Hill Book Company, Inc.

4) 20	5 10	4)12	5)15	4)16	5)0	5)20	5)25
4)8	4)36	5)30	5)35	4)0	5)45	5)5	4)32
5)40	4)28	4)20	6)36	6)42	6)54	6)0	6)6 614E.

d. Teach three figure dividends involving zero difficulties with no remainders and no carrying.

4)400	2)208	3)369	3)960
	,	717-1	2//44

e. Suggested activities.

Read and give answers orally:

$$6 + 4 = 18 + 3 = 10 + 2 = 30 + 5 = 4)48$$
 3)27 2)18

Read and fill in blanks:

f. Teach meaning of division facts as:

1.	of	1/3 of	1// 06	1/5 of	
3	OI	T/ 2 OT	1/4 O1	4/2 👊	

# O. Denominate Numbers

Review measures taught in previous grade.

. Teach:

## I. Minimum Requirements

#### A. Reading and writing numbers

- Review work taught in previous grade
   Arabic numbers through 5 digits
- 3. United States money reading through \$99,999 writing through \$9,999
- 4. Roman numerals (omit top and bottom enclosure lines except for I, II, III)
  - a. Reading through C
  - b. Writing through L

## B. Fundamental processes

- 1. Addition
  - a, Vocabulary
  - b. Test 100 addition facts
  - c. Review addition by endings
  - d. Adding through four orders
  - e. United States Money
  - f. Checking
- 2. Subtraction
  - a. Vocabulary

  - b. Test 100 subtraction factsc. Review work taught in previous grade
  - d. Subtract through four orders
  - e. Borrowing with all difficulties through four orders. Stress
  - f. United States Money
  - g. Checking

## 3. Multiplication

- a. Vocabulary b. Test 54 multiplication facts
- c. Review work taught in previous grade
- d. Complete multiplication facts (12 harder facts)
- e. Test 100 multiplication facts
- f. Rationalization of multiplication
- g. Three figure multipliers including zero difficulties
- h. United States Money
- 1. Checking

# 4. Division

- a, Vocabulary
- b. Test 40 division factsc. Review work taught in previous grade

- d. Complete division facts
- e. Test 90 division facts
- f. Major difficulty steps for examples having one digit divisors (remainders to be written fractionally.)
- G. United States Money
- h. Checking

# C. Fractions

Concepts in meaningful situations built on fractional parts of a whole (oral only) such as 1 1 1 of a whole 6 7 8 9

#### D. Decimals

1. Unites States money in all four fundamental processes.

#### Denominate Numbers

- 1. Review work taught in previous grade
- 2. Measures
  - a. Linear mile
  - b. Dry peck and bushel c. Weight ton

  - d. Time weeks, months, year
  - e. Temperature reading the thermometer
  - f. Counting dozen
  - g. Concept of circle, triangle (square & oblong)
  - h. Line graphs scores on subject matter

## F. Problem Solving

- 1. One-step meaningful problem
- G. Avoid crutches.

	Reading and Writing Nos.	Tundamental Processes	Fractions	Denominate Numbers	Problem Solving
1st nonth September	Review work of 3rd grade. New work - Teach reading and writing Arabic nur- bers thru 4 digits. Teach U.S. money - reading thru \$10,000 and write thru \$9,999	Review addition, subtraction, multi- plication and divi- sion facts and all 4 processes taught in third grade	Review fractional concepts in connection with multiplication & division facts	Review third grade work Line graphs (scores on subject natter)	Review third grade work on 1 step problems in connection with four fundamental processes
2nd nonth October	Roman Numerals - Teach read- ing and writing thru 25	Addition vocabulary Test addition facts. (100) Review adding by endings. Column addition thru 3 orders, including U.S. money. Add down. Check by adding up.		Table of Time and Calendar	One step addition problems
3rd noath Horenber	Periodical Review	Subtraction Vocabulary. Test 100 facts. Review third grade work. New-borrowing with all difficulties thru 3 orders. Checking.		Linear neasure (inch, foot, yard, nile)	One step addition and sub- problems

# II. Minimum Requirements in Detail

A. Reading and Writing Numbers

#### 1. Review:

a. Before beginning a study of four and five place numbers, a fourth grade child should be able to analyze a three place number in this way.

462
462 = 4 hundreds or 400 (four hundred)
and 6 tens, or 60 (sixty)
and 2 ones, or 2 (two)

462 or four hundred sixty two.

2. Introduce as new work Arabic numbers through five digits.
a. Teach reading and writing numbers according to
place value. Look at these numbers and see how the
figure changes its value.

Thousands	Hundreds	Tens	Units or Ones
			4
		4	O
	4	0	.0
4	0	· 0	Ö
Numbers re-	6	0	0
placing zeros	, 6	2	8

In other words, 4 means 4 units. In the next number (40) 4 means 4 tens. The next number is 400. In this number 4 means 4 hundreds. In the next (4000) 4 means 4 thousands.

b. A child should be taught that a zero can be replaced by a number, and that number takes on the name of the place in which it stands.

					rade 6		
					rade 5		
1		·		Ğ	rade 4		
Billions Same	Millions Same	Tho:	usands Tens	Units Ones	Hun- dreds	.'ens	Units or
			1 6	9	8	. 4	3
	2	5	0	6	3	1	0
1	6 0 0	9	4	6	0		0

The numbers when they are written read:

69 thousand. 843 2 million, 506 thousand, 310 1 billion, 600 million, 946 thousand, 000

Never say "and" in reading any whole number.

- c. Suggested Practices:
  - (1) Read these numbers 843; 1,682; 29,600; 30,602
  - (2) Write these numbers in words and vice-versa. 69,106; 2,803; 1467; 9,000
  - (3) Write these numbers in order. Begin with smallest, or largest.
  - (4) Match the following:

four orders.)

- (a) 4,615 1. three thousand, one hundred four (b) 6,800 2. two thousand (c) 2,000 3. (d) 3,104 4.

- (5) 2,864 means thousands, hundreds, tens, and ones. (This practice is of value for numbers up to and including
- Practice reading an address, a date, and a telephone number such as on a permanent record card. Date of birth, April 6, 1926 Address 2650 Plum Street Telephone 0-5221 License plates P G 611

Sometimes 2517 is read "twenty-five hundred seventeen". Then the word "thousands" is not used.

- United States Money 3.
  - a. Writing United States Money through four orders to the left of the point.
    - (1) 4¢ introduced as \$.04 Extensive practice up to \$.10
    - 55¢ as \$.55; 99¢ as \$.99
    - 1 dollar as \$1; \$1.; \$1.00 \$5.95; \$15.02; \$205.06
    - Note: Due to errors such as these \$1,5.02; \$2,05.06, stress proper placing of comma in United States Money.

- b. Reading United States Money through \$99,999.
- 4. Roman Numerals
- man Numerals

  a. Reading through 100.

  b. Writing through 50. Omit top and bottom inclosure line except for I, III.

## B. Fundamental Processes:

- 1. Addition
  - a. Vocabulary

addends total amount sum plus

b. Test 100 addition facts

50 easier facts	0 0	5 5	2	3 <u>3</u>	1 2	3	1	6 <u>1</u>	7 <u>1</u>	1 6	8 <u>1</u>	2 <u>9</u>	0 <u>4</u>	0 2
	1 <u>4</u>	<u>3</u>	<u>2</u>	<u>4</u>	9 9	4 <u>4</u>	7 7	2 3	0 5	5 1	8	6 6	<u>1</u>	8 0
	9	<u>6</u>	9 <u>1</u>	4 <u>1</u>	<u>4</u> <u>2</u>	1 9	5 2	2 7	1 8	2 8	<u>1</u> 0	3 <u>4</u>	5 <u>4</u>	2 <u>4</u>
	5	<u>1</u>	50	9 <u>3</u>	2 <u>6</u>	0 <u>1</u>	46	3 8 -						
50 harder facts	3 0 <del>-</del>	0 3 —	4 0 -	0 8 —	9 0 <del>-</del>	6 3	0 7 —	7 0 -	1 5	3 2 -	0 9 -	6 0 <del>-</del>	4 3 —	8 3
	3 9	5 3	2 5	3 5	7 2	47	8	37	56	3 6	4 8	7 3	6 2	6 <u>5</u>
	7 4	6 <u>7</u>	9 <u>4</u>	6 4	5 9	4 9	5 7	7 <u>5</u>	8 <u>9</u>	7 <u>6</u>	9	6 <u>9</u>	9 <u>8</u>	8 7
	8 <u>5</u>	96	6	5	8 6	7 8	7 9	9 <u>7</u>						,

It is suggested that this test be mimeographed (hectographed) and given for diagnostic purposes. For remedial work it would be advisable that the test be run off with the answers and put into the hands of the children.

c. Review addition by endings. (1) In sequence:

Not in sequence:

Reverse combinations:

Adding by endings with carrying:

(1) Suggested activities: Add 3 to each: 9, 6, 14, 20, 16, 18, 49

Add 6 to each number as you read: 8 18 28 38 48 58 68 78 88 98

Watching the tens! figures in addition

d. Addition to four orders

19 plus 64 ...

e. Addition of U. S. Money.

Limit it to examples with addends not larger than \$99.99

f. Checking:
Check by adding up.

(2) Subtraction:

a. Vocabulary
subtract
difference
remainder

minus minuend

moro than higher less

subtrahend how much is left? change received borrowing

b. Tost 100 facts:

<u>50 oasier</u> <u>facts</u>	<u>0</u>	5 <u>1</u>	3 2	7 7	1 <u>1</u>	<u>1</u>	3	4 <u>4</u>	5 <u>3</u>	6 6	4 2	9 <u>1</u>	9 2	30	
,	5 <u>4</u>	<u>0</u>	52	20	6 <u>1</u>	3	2	7 1	6 <u>5</u>	9	4 1	8 <u>4</u>	40.	5 5	
	5 0	6 <u>3</u>	4 <u>2</u>	2 2	10 1	10	6 2	2 <u>0</u>	7 0	6 4	7 <u>2</u>	<u>5</u>	10 5	9 <u>5</u>	
	11 2	12 6	<u>0</u>	<u>c</u>	8 7	7 <u>3</u>	7 5	9							
50 harder f.ets	7 <u>6</u>	<u>2</u>	10 7	9 7	8 6	12		10 6	10 4	9	9	ថ <u>3</u>	10 9	10 3	11 7
	14 7	9	7 <u>4</u>	12	11	10	}	11 3	12 _7	11 6	13 6	င <u>5</u>	12 <u>3</u>	11 9	12 _4
	1C 8	11 _8	12 _5	18 2	11	. 14	<u>.</u>	15 8	14	15	13 <u>7</u>	13 5	13 _8	13 2	16 7
	15 7	15	13 4	17 9	14	17	, } -	16 9	14						

Follow advice given for the addition facts at the end of Sec. 1b, page 29.

c. Review work of previous grades. Two place numbers, without borrowing.

76

Touch in all forms stated below.

From 76 subtract 24 5 Subtract 24 from 76

Mind the difference between 24 and 76

76 - 24

76 minus 24

76 take away 24

ubtract 76 70

\*:

ຼົ່າ ໜ່∜່.

ا الرواح (سالم المالية)

1 Military 1

Simple subtraction, no borrowing, zero in answer. 793 793 793 <u> 392</u> 383 683

Gaps, no borrowing

68 59 8 2

d. Introduce subtraction through four orders, with all difficulties except borrowing.

2426 7948 4079 9365 1104 6903 1021 331

e. Borrowing with all difficulties through four orders. Take Away-Borrow method is to be adopted for the entire city.

METHOD: Take Away - Borrow

Jim had \$.63. He spent \$.25 for a kite. How much did he have left? To find the answer, subtract.

**8.**63 You cannot take \$.05 from \$.03. Why? .25 Change 63¢ to 5 dimes and 13 pennies.

Now subtract, 5 from 13 = 8. Write 8 in ones' place in the remainder,

2 from 5 = 3. Write 3 in tens! place in the remainder. The remainder is \$.38.

Teach with real money, if you have it.

### (1) Number Stories Book III Studebaker, Findley, Knight, Ruch Scott Foresman & Co.

47 Remember to change 47 to 3 tens and 17 ones.

<u>- 38</u>

436 Think, 4 from 6 = 2 Write 2 in the difference

- 354 5 is more than 3. Change 4 to 3, think of the 3 as 13. Think 5 from 13 \* 8 Write 8: Think 3 from 3 \* 0 Do not write 0 The difference is 82.

Subtract as you do with other numbers. 503

You cannot take 4 from 3.\* You <u> 384</u> cannot take a 10 from 0 to change 3 to 13. Take a 1 from 5... Think of 5 as 4 and the 0 as 10. Then take a 1 from this ten.

Think of 10 as 9 and the 3 as 19. Now subtract.

4 from 13 = 9

8 from 9 7 1

3 from 4 8 1

Follow the same method as the above for subtraction all difficulties to four enders. Refer to page 62.

f. Review all difficulties in subtraction using United States mono. g. Checking: Teach checking from the beginning. (3) Multiplication (the sign X should be read times.) a. Vocabulary multiplicand carrying multiplier times partial product product b. Test 79 multiplication facts. (This includes all multiplication facts up through the tables of 6's) <u>3</u> <u>4</u> <u>Ż</u> c. Review work taught. One-place multiplier, no carrying \$.44 <u>x2</u> <u>x3</u> <u>x3</u> One place multiplier, with carrying \$7.72 <u>x5</u> <u>x6</u> One place multiplier, zero in the multiplicand, with carrying, 

**x6** 

Two place multipliers with carrying 33 62 78 55 28 **x**22 **x44 x43** 28 55 56 both 56 205 250 x29 x40 forms 40 \_47

In introducing zeros on the end, use both forms. Teach the shorter form with the zero extended beyond the multiplicand, last.

d. In the third grade you had all but 21 of the 100 multiplication facts. Here are the last 21 facts given below.

7 x 1 = 7 1 x 7 = 7 1 x 9 = 9 9 x 1 = 9  $0 = 0 \times 8$  $7 \times 9 = 63$ 7 x 7 × 49  $9 \times 7 = 63$ 8 x 8 =64  $7 \times 8 = 56$ 1 x 8 = 8  $8 \times 9 = 72$  $9 \times 9 = 81$ 8 x 1 = 8 8 x 7 = 56  $9 \times 8 = 72$ 0 \* 8 × 0  $0 \times 9 \approx 0$  $0 \times 7 = 0$  $9 \times 0 = 0$  $7 \times 0 = 0$ 

(1) Suggested Activities for drilling these facts. Interesting games and devices for reviewing multiplication tables. (1)

3 9	5	4 7 -	94	8	5	7 <u>4</u>	6 8 -	3 8	6 7	7 6	4 9	86	48
8 9	8 7	9	6	9	7 8	96	7						

Follow advice given for the addition facts at the end of Sec. 1 b, page 29.

## f. Rationalisation of Multiplication

Where attempts are made to teach the children why the second partial product is set one place to the left as a step in teaching how to multiply by a two-place multiplier, this plan is used. The multiplier is broken into its units and 10's value, and each is multiplied by separately. In the example: 242

42, two separate examples 2 and 40 484 9680

are done. The product of the multiplication by the 10's is added to the result obtained from multiplying by the 2, thus

It is shown that since the left hand figure is always a value of 10 or a multiple of 10, the product resulting from using it as a multiplier will end in zero. Therefore a space is left for the zero by treating the left hand figure as a separate multiplier and setting the second partial product one place to the left. Multiplication by a two-place multiplier ending in zero should be the first two-place multiplier taught if the above rationalization is used.

g. Three figure multipliers including zero difficulties.

216	405	370	456	584
x124	<b>X284</b>	*286	<b>207</b> 0	<u>×405</u>
308 ≭407	740 ×508	\$07 <b>★37</b> 0	₹300	

- h. Teach all above difficulties using United States Money. (dollars and sents)
- i. Checking: Interchange multiplicand and multiplier.

7)14	3]0	8)8						

# c. Review work taught in previous grade.

## (1) Suggested activities:

Read and give quotients orally:

16 4 4 =

10 + 2 =

18 + 3 =

30 \$ 5 \$

1.5.

 $Y_{\mu} = \rho \pi$ 

Name the divisor and dividend to each.

Read and give quotients orally:

728 3727

2)68

Give the enswers of:

1/4 of 4 = 1/2 of 88 = 1/3 of 30 =

Read and fill in blanks:

24 = \_\_\_\_/18 35 = \_\_\_\_518

18 = \_\_\_3's 10 = \_\_\_2's

Fill in quotients:

4)400 5)520 2)604

d. Complete 15 Division Facts.

9)36	9163	9772	9)81	9)9
8)0	8)56	8)64	8)72	9)0
7)0	7)7	7)49	7)56	7)63

e. Test 90 Division Facts:

2)2	7)7	8)24	9)9	5)5	\$) <del>64</del>
6748	4,728	474	8)48	4724	1)1
9)63	4)0	1)2	4)36	5)0	670

	9)46	9)47	9)48	9)49	,

h. Checking division by multiplying the quotient by the divisor,

60C. check

#### C. Fractions:

1. Concepts in meaningful situations built on fractional parts of a whole,

a. Division facts only as it \$ of 42 = 7 same as 6)42 Some of the second was

$$\frac{1}{8}$$
 of 72 = 9 Same as  $8\sqrt{72}$ 
 $\frac{1}{9}$  of 45 = 5 " " 9 $\sqrt{45}$ 

b. No fraction vocabulary introduced in this grade.

#### D. Decimals:

1. United States money should be introduced in all four fundamental processes.

#### E. Denominate Numbers:

- 1. Review work taught in previous grade
  - a. Linear: inch, foot, yard
  - b. Liquid: 1/2 pint, quart, gallon
  - o. Dry: recognize peck and bushel baskets
  - d. Money: all coins to one dollar
  - e. Time: seconds, minutes, hours, days. Reading dates
  - f. Weight: ounce (visualized)

#### 2. Measures:

- a. Linear mile
  - (1) Locate three or four places that are a mile away from the school building.
  - (2) Ride a mile noting the amount of time it takes.
  - (3) Walk a mile noting the amount of time it takes.

## b. Dry

(1) Learn 8 quarts= 1 peck

32 qts. = 1 bu.

4 pks. = 1 bu.

c. Weight - 16 ounces 1 1b.

2000 lbs 1 ton

d. Time: 7 days = 1 week

30 days = 1 month

4 weeks = 1 month

52 weeks # 1 year

12 months 1 year

365 days = 1 year

- e. Temperature: Teach the degree symbol keep weather charts
- f. Counting: 12 things 1 dozen 12 dozen 1 gross
- g. Concept of circle, triangle, square and oblong these only as a child will meet such figures in his daily life

- h. Line graphs: Individual scores on subject matter competitive class work - contributions
- F. Problem Solving in grade 4 limited to one step problems

The aims and suggestions for improvement of written problem work used here were taken from Teaching the New Arithmetic by Guy M. Wilson, McGraw-Hill Book Co., Inc. New York City. Part III in this same book is an excellent written problem unit.

- 1. Aims of written problem work.
  - a. Objective thinking in terms of real life.
  - b. Interpretation of real situations when encountered.
  - c. Ability to apply and use number work when it is needed.
- 2. Suggestions for the improvement of written problem works
  - a. Isolated text problems as such should be entirely eliminated from the school room.
  - b. Meaningful problem material involving the use of stories. descriptions, business view points and situations such as shopping trips, visits to stores, and farms - is the minimum basic requirement.
  - c. A major proportion of the time on written problem work should be given to the development of real experiences.
  - d. Life situations and real experiences, if developed properly, will become the basis for thinking, organizing and planning. The result of this should be an understanding of the real meaning of numbers as used outside of school in the child's daily life.

## Bibliography:

Department of Public Instruction, Commonwealth of Pa., Bulletin 360, Quantitative Aspects of Exertencing in the Elementary School

Hildreth, Gertrude, Learning the Three Ris, Educational Publishers Inc., Ch. XIV pp. 473-484

Morton, R. L., Teaching Arithmetic in the Elementary School, Silver Burdett Co. Book II Ch. II 1203-1

#### Grade 5

Important - Follow this Course of Study. Each teacher should have a desk copy of "Social Utility Arithmetic, Book 3" - Strayer Upton - American Book Company,

I. Minium Requirements

- A. Heading and writing numbers
  - 1. Review work taught in previous grade
  - 2. Arabic Numbers through 7 orders
  - 3. United States Money through millions
  - 4. Roman Numerals

#### B. Fundamental Processes

- 1. Addition
  - a. Review
    - (1) Vocabulary
    - (2) Review addition facts (3) Adding by endings

    - b. Addition through higher orders
    - c. United States Money
    - d. Checking
- 2. Subtruction
  - a. Review

    - (1) Vocabulary
      (2) Review subtraction facts
      (3) Review work of previous grade
  - b. United States Money
  - c. Checking
- 3. Multiplication
  - a. Review

    - (1) Vocabulary (2) Review multiplication facts
    - (3) Zero difficulties
  - b. United States Money
  - c. Checking
- A. Division
  - a. Review

    - (1) Vocabulary (2) Division facts
      - (3) Division by one digit divisors
  - b. United States Money
  - c. Checking
  - d. Six Steps in long division by 2 digit divisors.
  - e. Difficulties and when presented f. Checking
- C. Fractions
  - 1. Introduction of fractions

    - a. Vocabulary b. Review fractional concepts of previous grades
    - c. New Tractional concepts
      - (1) Parts of a whole meaning of a fraction (2) Terms of a fraction
      - The state of the state of

- 2. Kinds of Numbers
  - a. Whole numbers
  - b. Proper fractions
  - c. Improper fractions
  - d. Mixed numbers
- 3. Reduction
  - a. Proper fractions
  - b. Improper fractions
- 4. Addition
  - a. Like fractions
- 5. Subtraction
  - a. Like fractions
- 6. Addition
  - a. Unlike fractions
- 7. Subtraction
  - a. Unlike fractions
- D. Decimals
  - 1. United States Money
- E. Denominate numbers
  - 1. Review work done in previous grades.
  - 2. Fractional parts
- F. Problem Solving
  - 1. One step
  - 2. Two Question
  - 3. Finding Averages
  - 4. Making Change
- G. Bar graphs
- H. Avoid crutches.

,		

## II. Minimum Requirements

444	MINIMUM REQUIRE	mi011 n2			
	Reading and Writing Numbers	Fundamental Processes	Fractions	Denominate Numbers	Problem Solving
lst month September	Ath grade. New	multiplication & division facts & all 4 processes taught in 4th grade. Review	Review fractional con- cepts in connection with multi- plication & division facts	Line graphs as a temper- ature chart or on sub- ject matter	Problems involving the use of the fundamental processes and U.S. money
1	Review Roman numerals by reading to C & writing to L dates inciden- tally as needed	Complete review of previous month Introduce long division. 1-Divisors 11 &12 2-Divisors 21 3-All divisors ending in 1,2,3,4 or 5. Quotient figure always correct		Same	Problem solving in- volving long division
3rd morth November	Periodical review	Division of: 1-U.S. money 2-Remainders 3-First diffi- culty - zeros 4-Second diffi- culty is lower- ing the quotient	Use your remainders as fraction;		Problems involving work taught
4th month December	Periodical review	Division: 1-Review 2nd difficulty 2-Divisors end- ing in 6,7,8,9 3-3rd difficulty remainder-raise quotient figure.	ļ		Problems involving work taught
5th month	Periodical review	Review: 1-3rd difficulty 2-Using 9 as a quotient figure 3-Finding quotient figures at a glance 4-Divisors from 13 to 18 Review			One step

	Reading and Writing Numbers	Fundamental Processes	Fractions	Denominate Numbers	Problem Solving
	Review work of previous grade. New Work: Teach reading & writing Arabic nos. thru 7 orders. Teach U.S. money reading to \$1,000,000	mental pro-	Build up our fractional concepts and vocabulary. Reduction of proper & improper fractions. Kinds of fractions. Addition of like fractions	Fractional parts eg: 6 in.=_ ft. etc.	One step problems in- volving fractional parts and reductions
7th month Merch	Review	Review	of all types Subtraction of like frac- tions all types. Review addition by using same examples for both addition & subtraction	-10. <b>20.</b> 1	Problems using fractions
8th month	Review	Review	Addition and subtraction of unlike fractions finding L.C.D	Review	Carry on problem work in- volving life situations
9th month	Review	Review	Continue practice on all types in addition and subtraction of fractions	Review	One Step problems with two questions
10th month June	Intensive review	Intensive review and work with U.S. money, all processes	Intensive	Review of fractional parts	Problems using frac- tions and fundamentals

	ı	

## I. Minimum Requirements in Detail

- A. Reading and writing numbers
  - 1. Review:
  - 2. Introduce as new work Arabic numbers through seven digits.
    - a. Teach reading and writing numbers according to place value, as presented in the fourth grade outline in sections 2a, p. 27 and 2b, p. 27.
  - 3. United States Money
    - a. Review:
    - b. Reading United States Money as needed in every day situations.
  - 4. Roman Numerals omit top and bottom enclosure lines except in I, II, and III
    - a. Using units tens and hundreds as a base, teach the larger ones as the children come in contact with them e. p.: dates

	B	1000					
I =	1	XX ·	<del></del>	20	CC	=	200
II ==		XXX	<del>-</del>	30			300
III =	-	$X\Gamma$	<del></del> -	40			400
IV =		L	==	50			500
_ V =	_	ΙX	Ξ	60	DG	<b>=</b> :	600
	-	TXX		, -	DCC	=	700
VII =	-	LXXX	=	80	DOCG	=	800
VIII =	-	ХC			CM	=	900
IX =	-	C	=. ]	.00			
X 1	10						

### B. Fundamental processes

- 1. Addition
  - a. Review:
    - (1) Vocabulary Gr. 4 Sec. B 1. a, p. 29 and page 65.
    - (2) Test 100 addition facts
      - (a) as listed in Section B 1. b, p. 29 fourth grade outline or back of book page 60.
    - (3) Adding by endings
  - b. Addition through higher orders when necessary
  - c. United States Money
    - (1) Limit to examples within the child's knowledge of money
  - d. Checking
    - (1) Check by adding up
- 2. Subtraction
  - a. Review:
    - (1) Vocabulary Gr. 4 sec. B 2 a, p. 31 and page 65.
    - (2) Test 100 subtraction facts
      - (a) as listed in Sec. B 2 b, p. 31 in fourth grade outline or back of book page 61.

    - (3) Review work of previous grade (a) Take away horsow method as presented in Sec. b 2 e, p. 31 in 4th grade outline.
  - b. United States Money
    - (1) Review all difficulties in subtraction using United States money

With the same

- c. Checking
  - (1) 76

- 3. Multiplication
  - a. Review:
    - (1) Vocabulary Gr. 4 Sec. B 3 a, p. 33

(2) Test 100 multiplication facts

- (a) as listed in Sec. B 3 e pp. 33 in 4th grade outline.
- (3) Zero difficulties
- b. United States Money
  - (1) Teach all difficulties using United States Money
- c. Checking
  - (1) Interchange multiplicand and multiplier

24	32 check
<b>x32</b>	<u>*24</u>
48	128
72 768	64
768	<u>64</u> 768

#### 4. Division

- a. Review:
  - (1) Vocabulary Sec. B 4 a, P. 36 Grade 4
  - (2) Test 90 division facts as listed in Sec. B 4 b and 4 d in the fourth grade outline, pp. 36-37.
  - (3) Division by one digit, with all difficulties
- b. United States Money
- c. Checking
- NEW Long division is the important new work in 5-1, We have found that the finest presentation of the subject of long division is in Social Utility Book 3,Ch. 2, pp. 47 through 91. The following are excerpts from the above:

#### Method for finding total divisor:

- Rule I. For two figure divisors between 19 and 99 ending in 1. 2. 3. 4 or 5 divide the partial dividend by the first figure of the divisor to obtain a quotient figure.
  - 21 31 41 51 61. 71 81
  - 22 32 42 52 62 72 82 92 24 belongs to the 20
  - 23 33 43 53 63 73 82 93 family because it is 24 34 44 54 64 74 84 94 closer to 20. The 25 35 45 55 65 75 85 95 trial divisor is 2.
- Rule II. For two figure divisors between 19 and 99 ending in

6. 7. 8 or 9 each quotient figure is found by dividing the partial dividend by one more than the first figure of the divisor.

26 36 46 56 66 76 86 96

27 37 47 56 67 77 87 97 88 belongs to the 90 28 38 48 58 68 78 88 98 family because it is 29 39 49 59 69 79 89 99 closer to 90. The

trial divisor is 9 The second of th

- d. Six steps in long division
  - (1) <u>Divide</u> the partial dividend by the divisor. Write the first figure of the quotient over the last figure of the partial dividend

(2) Multiply the divisor by the quotient figure

(3) Compare to see if you can subtract

(4) Subtract

- (5) Compare to see if the remainder is smaller than the divisor
- (6) Bring down the next figure of the dividend

Remember the six steps thus:

- 1. Divide
- 2. Multiply
- 3. Compare
- 4. Subtract
- 5. Compare
- 6. Bring down
- e. Difficulties and when presented (1)
  - (1) Divide by 11 and check
  - (2) Divide by 12 and check
  - (3) Divide by 21 and check
  - (4) Eventually use any divisor ending in 1, 2, 3, 4 or 5 the first figure always correct
  - (5) Division of dollars and cents
  - (6) Remainders in long division
  - (7) Zero difficulties
    Difficulty I. When you cannot divide place a
    zero in the quotient and bring down the next
  - number
    (8) All divisors ending in 1, 2, 3, 4 or 5 when quotient figure is not always correct
    Difficulty II. When you cannot subtract lower the quotient figure

(9) Divisors ending in 6, 7, 8, or 9 quotient figure always correct

(10) Divisors ending in 6, 7, 8, or 9 quotient figure not always correct
Difficulty III. When your remainder is the same or larger than your divisor raise your quotient figure

(11) Trying 9 as a quotient figure

(12) Finding quotient figures at a glance

(13) Divisors from 13 to 18

f. Checking: There is no trial divisor for divisors between 13 - 18. Teach children to guess or estimate mentally

(1) To check an example in division, multiply the quotient by the divisor and add the remainder to the product. The result should equal the dividend. Teach shocking from the beginning. (2)

48.

#### C. Fractions

- 1. Introduction of fractions
  - a. Vocabulary

numerator

denominator improper fractions proper fractions

mixed numbers fraction terms form reduce reduction

related like denominators common denominators unlike denominators

whole numbers value

b. Review fractional concepts of previous grades.

c. New fractional concepts

(1) Parts of a whole - a fraction is a broken number. Teach by illustration:

(a) parts of pie

- (b) parts of money 1/4 of dollar (c) parts of fruit 1/2 of orange (d) parts of paper 1/3 of paper
- (2) A fraction has two terms, denominator and numerator
  - (a) The denominator is the number below the line. It tells us into how many equal parts the whole is divided
  - (b) The numerator is the number above the line. It tells us how many parts of the whole we are using

#### 2. Kinds of Numbers

- a. Whole numbers
- b. Proper Fractions
  - (1) A fraction less than 1. Its numerator is smaller than the denominator. 2
- c. Improper fractions
  - (1) A fraction equal to or larger than 1. Its numerator is the same or larger than the denominator. g or 9
- d. Mixed numbers
  - (1) Has a whole number and a fraction like 2 \frac{1}{2}

#### 3. Reductions

- a. Proper fractions

  - (2) Change to higher terms

    1 (x4) 4
    2 (x4) 8

Establish concept - multiplying and dividing both terms of a fraction does not change its value

· , \* , \*

b. Improper fractions

(1) Change to lowest terms

$$\frac{4}{4} = 1$$
  $\frac{5}{4} = 1\frac{1}{4}$   $\frac{6}{4} = 1\frac{2}{4} = 1\frac{1}{2}$ 

4. Addition

a. Like fractions

(1) Sum less than one, no reduction

(2) Sum equal to one

1/2 1/8 1. Add fr. 
$$\frac{1/2}{2/2} = 1$$
 8/8 = 1

(3) Sum less than one: reduction

(4) Sum more than one

3/4 7/8 Same 
$$\frac{2/4}{5/4} = 1\frac{1}{4}$$
  $\frac{3/8}{10/8} = 1\frac{2}{8} = 1\frac{1}{4}$ 

(5) Whole numbers and fractions

(6) Mixed number and fraction, like fractions

1 1/8 1/6 1. Add fractions  
3/8 6 1/6 2. Add whole numbers  
1 4/8 
$$\pm$$
 1 1/2 6 2/6 = 6 1/3 3. Reduce

(7) Two mixed numbers

$$3 \frac{1}{4}$$
  $3 \frac{1}{4}$   $6 \frac{4}{5}$   
 $2 \frac{1}{4}$   $3 \frac{3}{4}$   $7 \frac{2}{5}$  Same  
 $5 \frac{2}{4} = 5 \frac{1}{2}$   $6 \frac{4}{4} = 7 \frac{13}{6} = 14 \frac{1}{5}$ 

5. Subtraction

a. Like fractions

- (1) Minuend larger than the subtrahend
  - (a) Fraction minus a fraction

    3/4 7/8 1. Subtract fractions

    1/4 5/8 2. Reduce

    2/4 = 1/2 2/8 = 1/4
  - (b) Mixed number minus a fraction
    3 3/4 5 5/7 1. Subtract fractions
    1/4 3/7 2. Subtract whole
    3 2/4 \* 3 1/2 5 2/7 numbers

(e) Mixed number militie a whole number

(d) Mixed number minus a whole number 8 1/2 7 3/4  6 6 6 Same 2 1/2 1 3/4	*
(2) Subtraction involving changing the form (a) h whole number minus a fraction  6 = 5 2/2 8 = 7 4/4 1. Subtract fraction  1/2 1/2 3/4 3/4 tions 5 1/2 7 1/4 (a) change form 2. Subtract whole numbers 3. Reduce	*
(b) A whole number minus a mixed number  5 = 4 4/4 9 = 8 2/2  4 1/4 4 1/4 5 1/2 5 1/2 Same  3/4 3 1/2  (c) Mixed number minus a fraction	
8 $1/3 = 7 4/3$ 9 $3/5 = 8 8/5$	•
$73/5 = 68/5$ $81/4 = 75/4$ Same $\frac{54/5 = 54/5}{14/5}$ $\frac{43/4 = 43/4}{32/4}$ Same $\frac{14/5}{32/4}$ $\frac{31/2}{32/4}$	
6. Addition a. Unlike fractions (1) Rules for finding Least Common Denominator (a) Inspection - Look at the largest denominator to see if all others go into it evenly (b) Multiply the largest denominator by 2,3,4,etc.	<b>V</b>
(2) Sums less than one  1/2 = 2/4 3/8 3/8 1. Find L. C. D.  1/4 1/4 1/2 = 4/8 2. Raise to higher  3/4 7/8 terms  3. Add fractions  4. Reduce	*
(3) Sums more than one $1/2 = 2/4$ $5/6$ $5/6$ $3/4$ $1/3 = 2/6$ $5/4 = 1 1/4$ $7/6 = 1 1/6$ (4) Harder mixed numbers	
16 3/5 = 16 9/15	
2. Find L. G. D.  3. Raise to higher terms  4. Add fractions  5. Add mole manager Education  6. Resident & DOCUMENT ATION  LIER ARY & DOCUMENT ATION  51.	1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1

## 7. Subtraction

- a. Unlike Fractions
  - (1) Steps follow addition of unlike fractions (a) Unlike Fractions involving the harder step in

changing form.

7 1/2 = 7 2/4 = 6 6/4 l. Bring over the whole 2 3/4 = 2 3/4 = 2 3/4

- 2. Find L. C. D.
  - 3. Raise to higher terms 4. Subtract fractions
    - (a) Change the form
  - 5. Subtract whole numbers 6. Reduce
- (b) Systematic review of addition and subtraction of fractions using the same problem for both steps e.g.:

 $7 \frac{1}{2} = 7 \frac{3}{6}$   $44 \frac{2}{3} = 4 \frac{4}{6}$   $11 \frac{7}{6} = 12 \frac{1}{6}$   $7 \frac{1}{2} = 7 \frac{3}{6} = 6 \frac{9}{6}$   $-4 \frac{2}{3} = 4 \frac{4}{6} = 4 \frac{4}{6}$   $2 \frac{5}{6}$ 

- D. Decimals
  - 1. United States Money

a. Using all four processes \$4.48 \$10.00 \$2

+3.75 -\_ 8.23 × 48

1/5 of \$160

22)\$124.74

- E. Denominate Numbers
  - 1. Review work done in previous grades
  - 2. Fractional parts

a. 6 in. = \_\_\_ ft. 4 1emons doz. 18 cranges = \_\_\_\_ doz.

> All common denominate numbers that the child finds a use for should be taught in the above form

- F. Problem Solving
  - 1. One step

a. As presented in Grade Four, Sec. F.

2. Two question problems

a. Both questions stated

3. Finding averages

a. Class averages

- 4. Making change
- G. Bar graphs

### Grade 6

- I. Minimum Requirements
  - Reading and writing numbers
    - 1. Review work taught in previous grade.
    - 2. Arabic numbers taught through 8 and 9 digits.
  - В. Fundamental Processes
    - 1. Review addition, subtraction and multiplication.
    - 2. Division by three figure divisors.
  - C. Fractions
    - 1. Review addition and subtraction
    - 2. Multiplication
      - a. vocabulary
      - b. suggested procedures
      - c. types of examples
    - 3. Division
      - a. vocabulary
      - b. suggested procedures
      - c. types of examples
    - D. Decimals
      - 1. Vocabulary.
      - 2. Reading and writing decimals.
      - 3. Value of decimals.
      - 4. Changing decimal fractions to common fractions
      - 5. Addition and subtraction
        - a. suggested procedures
      - Multiplication
        - a. suggested procedures
      - Division
        - a. suggested procedures
    - E. Perimeter
    - F. Area
    - G. Two Step Problems
    - H. Circle Graphs
    - I. Avoid crutches

Ġŧ	n Grade	4	Month	by Month		
	Reading & Writing Nos.		Fractions	Denominate Numbers	Decimals	Problem Solving
		Review 4 fundamental processes		,		
September	Review	Review long div. All difficulties NEW - 3 figure devisor	Review Addition and Subtract- ion	Review	Fundamental Processes using U. S. Money	Practice

## II. Minimum Requirements in Detail.

- A. Reading and Writing Numbers
  - 1. Review
  - 2. Arabic Numbers taught through 8 and 9 digits according to method, outlined in Grade IV, pp. 27-28.

#### B. Fundamental Processes

- 1. Review addition, subtraction, multiplication
- 2. Division by three figure divisors
  - a. Review finding trial divisors using three figure divisors

#### C. Fractions

- 1. Review addition and subtraction
- 2. Multiplication
  - a. Vocabulary

cancel, cancelling, cancellation, multiplier, multiplicand, product, times

b. Suggested procedures

- (1) Stress the fact that "of" means "times"
- (2) A whole number may be expressed with a denominator of one
- (3) Practice short division to facilitate teaching cancellation
- (4) Cancellation should be taught as a short cut method <u>after</u> the usual procedure of multiplying a fraction or a mixed number by an integer has been learned
- (5) Stress the fact that all answers must be expressed in simplest form
- (6) Stress the importance of paying attention to signs before beginning work
- c. Types of examples

(1) Proper fractions multiplied by integers

12 x 3 4 x 12 4 of 8
(2) Mixed numbers multiplied by integers

(3) Proper fractions multiplied by a proper fraction

(4) Mixed numbers multiplied by proper fractions 2½ x ½

 $\frac{7}{8} \times 2 = \frac{2}{3}$ 

(5) Mixed numbers multiplied by mixed numbers

3 g x 1章 4 4 x 7 g

- 3. Division
  - Vocabulary a. divide, divisor, invert, quotient, dividend, reciprocal
  - Suggested procedures
    - (1) Divisor must be inverted and the inverted divisor is called the reciprocal
    - (2) A whole number may have a denominator las 4
    - (3) The sign + means "divided by".
    - The dividend (the number to be manipulated) is always to the left of the sign
  - c. Types of examples
    - (1) Proper fractions divided by integers

 $\frac{7}{8}$  + 2 and 2 +  $\frac{7}{8}$ 

Proper fractions divided by a proper fraction

$$\frac{8}{9} + \frac{1}{2} \qquad \frac{3}{4} + \frac{1}{3}$$

(3) Mixed Numbers divided by integers

$$2\frac{2}{3} + 6$$
 and  $6 + 2\frac{2}{3}$ 

(4) Mixed Sumbers divided by proper fractions

$$3\frac{3}{4} + \frac{7}{8}$$
 and  $\frac{7}{8} \approx 3\frac{3}{4}$ 

(5) Mixed Numbers divided by mixed numbers  $3\frac{3}{5} + 2\frac{1}{2}$   $1\frac{1}{3} + 2\frac{7}{8}$ 

$$3\frac{3}{5} + 2\frac{1}{2}$$
  $1\frac{1}{3} + 2\frac{7}{8}$ 

#### D. Decimals:

1.	Vocabulary	tenths
	decimal fraction	hundredths
	decimal point	thousandths
	Lewinah havim	ten-thousandthe

- Reading and writing of decimals through four places a. When writing decimals from dictation a pupil should learn to think.
  - (1) number of decimal places in the number

  - (2) number of <u>digits</u> in the number stated (3) number of <u>zeros</u> needed to fill the required places
  - b. Teach the function of zeros in decimal fractions
- 3. Value of decimals
  - Teach arranging decimal fractions according to their ascending and descending value.

.083	2.6
<b>.</b> 09	.9
.147	.87
.6	.3
1.5	.125

$$.3 = \frac{3}{10} \qquad .5 = \frac{5}{10} = \frac{1}{2}$$

$$6.75 = 6 \frac{.75}{100} = 6\frac{3}{4}$$
(teacher information only) 
$$.06\frac{1}{4} = \frac{61}{100} = \frac{25}{4} = \frac{100}{100} = \frac{27}{4} \times \frac{1}{100} = \frac{1}{16}$$

5. Addition and subtraction

a. Suggested procedures

(1) Introduce with use of U. S. Money Show the analogy to common fractions

$$\frac{1}{10} = .1$$

$$\frac{9}{10} = .9$$

$$+ \frac{3}{10} = .3$$

$$\frac{7}{10} = .7$$

$$\frac{4}{10} = .4$$

$$\frac{2}{10} = .2$$

## 6. Multiplication

Suggested procedures

(1) Introduce with use of U. S. Money

Show the analogy to common fractions

$$\frac{.7}{3.5} = \frac{.7}{10} \times 5 = \frac{.35}{10} = 3\frac{.5}{10}$$

$$\frac{.7}{x.3} = \frac{7}{10} \times \frac{3}{10} = \frac{21}{100}$$

#### 7. Division

Suggested procedures

(1)Introduce with use of U. S. Money

Divide a decimal by a whole number

Divide a decimal by a whole number with remainders

Divide a whole number by a whole number

Change a common fraction to a decimal

Teach 20 decimal equivalents

1= '	<u>3</u> ≥ 5	$\frac{7}{8} =$	10 =
1= '	<u> </u>	1 3 =	$\frac{3}{10} =$
<del>3</del> =	<u>1</u> =	<del>2</del> =	$\frac{7}{10} =$
1 5	<u>3</u> =	$\frac{1}{6} =$	$\frac{9}{10} =$
2=	<del>5</del> =	<del>5</del> =	<del>20</del> =

Divide a decimal by a decimal

(7) Divide a decimal by a decimal (8) Divide a whole number by a decimal

#### E. Perimeter

Find perimeter of objects within the child's experience.

Teach the perimeter as a straight line extending 2. about all sides.

Figures to be recognized (no definitions to be 3. learned)

rectangle - square - oblong

triangle ъ.

## F. Area (1)

- 1. Build by actual experience a concrete concept of square in., square ft., square yd.
- 2. Make finding areas a meaningful experience

## G. Problem Solving

1. Introduce two step problems. Follow the advice given in Gr. 4 Sec. F, p. 41.

## H. Graphs

1. Use circle graphs to portray such activities as lend themselves to that kind of treatment.
